# International Conference

## New Interactions in the Energy Landscape

The International Conference **New Interactions in the Energy Landscape** will take place on the 24th and 25th of January 2024, promoted by **Politecnico di Milano | Piacenza Campus**, in collaboration with the Department of Architecture and Urban Studies (**DAStU**) and the Energy Department (**DENG**).

The conference will focus on the landscape transformation processes connected to energy production from renewable sources, involving a multidisciplinary approach. The aim is to foster new reflections investigating the relationship between ecological transition and landscape by analyzing land modifications through research and design tools.

The conference is organized in four sessions, two per day, divided into three special focuses with international keynote speakers and discussants, and an open talk with experts on the topics; on the second day will take place a round table in which the selected Ph.D. candidates and researchers will be asked to give a presentation about the submitted abstract.
